

Arm-R-Lite Announces First ADA-Compliant Aluminum Man Door

In August, Arm-R-Lite announced that it now fabricates the industry's only aluminum and glass sectional ADA-compliant man door.

This new door, placed within an operable aluminum and glass sectional garage door, can serve as a public egress and does not pose a tripping hazard. The industry's current sectional garage door man doors require a step-over rail that prevents wheelchair access. Arm-R-Lite's ADA man door is fabricated with a wheelchair-accessible threshold and no step-over rail.

The ADA pedestrian door can be fabricated within Arm-R-Lite's welded aluminum and glass Titan or Custom CI models with motor or manual operation. To meet ADA requirements, pass doors must be installed in a sectional door not wider than 10', not shorter than 8', with at least 24" of headroom.

All ADA man doors are fabricated 36" wide and at least 7' high to comply with current ADA requirements. The man doors are located in the center of the sectional door and can be adjusted to swing out to the left or the right. Each pass door is equipped with a lock and closer. Custom options such as panic bars are available. www.arm-r-lite.com ■
